Legal Opinion: KSN Token

Introduction

This Legal Opinion is drafted at the request of KSN TOKEN, a company duly organized under the laws of its jurisdiction, and bearing License Number 15249441. The purpose of this legal analysis is to examine the business model of KSN Token, evaluating its compliance with the Listing Rules for the Trading Venue operated by Exchanges. Our law firm, situated in the India, employs an interpretative framework based on the legal authorities relevant to Exchanges incorporated in India, the European Union, and other pertinent international jurisdictions, as delineated below.

It is crucial to emphasize that, for the issuance of this Opinion, we have proceeded under the assumption, without further inquiry, that all factual circumstances presented in the provided documentation are accurate and genuinely reflect the real conditions surrounding the company. Any potential deviations from these factual circumstances, if discovered, are considered to have no adverse effect on the opinions expressed herein.

This Legal Opinion is not for public use, it will not be made available on the client's website, on any other website, or on any social media platform, the document will be used strictly for the purposes it is being issued: the client's relationship with the centralized exchanges. Any breach of this attorney-client privilege clause will result in direct and immediate punitive damages of 50.000 USDT to the Law Firm.

For the issuance of this Opinion, we have proceeded, without additional investigation, on the assumption that all factual circumstances presented in the provided documentation are accurate and faithfully represent the actual conditions surrounding KSN TOKEN. Any potential discrepancies in these factual circumstances, if discovered or proven inaccurate, are considered to have no detrimental impact on the opinions expressed in this document.

It's important to note that our law firm is based in the European Union (EU), and the legal interpretation is grounded in the authorities relevant to Exchanges incorporated in the United States of America, the European Union, and other pertinent international jurisdictions, as delineated below.

Documents and Basis of Opinion

In the preparation and for the purposes of this Legal Opinion, we have examined the following documents:

- The Whitepaper submitted to us by the Client ("the Whitepaper");

- All other documents, international laws and regulations, including all relevant Indian and European regulations having a direct impact on the Project, which, in our judgment, were necessary or appropriate for us to scrutinize to provide the opinion expressed below for KSN TOKEN.

Assumptions

Our legal opinion is based on the assumptions that the Whitepaper submitted to us by the Client is correct and complete in all material respects;

The KSN Token, under the current securities law frameworks, would be tagged as a Utility Token as it would provide access to the ecosystem, wherein the KSN Token would act as a currency for the ecosystem wherein people can participate and earn rewards based on their participation. They are not designed as an investment nor should anyone interpret or invest keeping in mind the same. The KSN Tokens serve this limited yet much important function and hence can only be termed as Utility Token and not a Security as per existing Securities Law Frameworks.

As more fully set forth in the component parts of this document, the document does not constitute legal advice and should not be relied on by any person.

Business description. Key features.

Welcome to the future of agriculture with KSN Token! As a revolutionary cryptocurrency, KSN Token is set to transform farming by harnessing the power of decentralized finance and Web 3.0 technology.

Operating on a decentralized network, KSN Token eliminates intermediaries, ensuring secure and cost-effective transactions for farmers. Smart contracts automate agreements, guaranteeing trust and transparency in every interaction. The token provides liquidity, enabling farmers quick access to funds for enhanced agricultural activities.

KSN Token's community-led governance model ensures active participation in protocol development, aligning the platform with the evolving needs of its users. Beyond financial empowerment, KSN Token champions sustainability by supporting eco-friendly initiatives within the agricultural sector. Plant a tree with KSN Token and earn tokens, fostering a greener future for agriculture.

In exciting news, KSN Token has recently concluded seven airdrops, providing users with valuable tokens. Stay tuned for updates on upcoming airdrops, ensuring you don't miss out on opportunities to grow your KSN holdings.

For farmers, KSN Token means overcoming financial constraints, boosting productivity, and accessing capital. Blockchain transparency ensures traceable transactions, fostering confidence and accountability. Join the KSN Token revolution – whether you're a farmer seeking financial liberation or an investor exploring meaningful opportunities. Unleash the potential of agriculture with KSN Token and embrace a future where possibilities are limitless!

The Term IEO vs. TGE

The term "IEO" stands for Initial Exchange Offering. This term is popular amongst the blockchain and cryptographic currency, and its meaning is known to be "new cryptographic token sale". This term's similarity to the term "IPO", to our opinion, is only meant to serve as an easy explanation to this digital event, which is often misunderstood to the common people. It should be noted that in order to avoid confusion, a part of the blockchain community prefers to use the term "TGE", which stands for "Token Generating Event". Nevertheless, to be perfectly understood by the community, to avoid unfamiliar and misunderstood nomenclature, for the convenience of analysis the term ICO has been used in this document although it does not carry any special meaning in legal terms.

The KSN Project and Token

Six Kinds of Tokens

Generally speaking, there are six kinds of tokens that can be issued to the public:

FARM TOKEN: KISSAN TOKEN is strategically positioned to serve as a widely adopted utility token specifically designed for facilitating cross-border farm transactions. Beyond its role in enabling seamless international agricultural exchanges, the token is poised to play a pivotal role in granting access to the decentralized farm marketplace that Kissan Network plans to launch. This innovative initiative aims to provide participants with a platform where they can actively engage in decentralized farming activities, fostering a global network that transcends geographical boundaries and enhances the efficiency and inclusivity of cross-border farm transactions.

PROTOCOL TOKEN: KISSAN TOKEN aims to establish robust protocols and platforms, creating a dynamic environment for farmers, agricultural businesses, investors, and other participants. Within this decentralized ecosystem, stakeholders can seamlessly interact, exchange value, and actively participate in diverse agricultural activities. This innovative framework prioritizes decentralization and transparency, fostering an inclusive space where the entire agricultural community can engage collaboratively. By facilitating decentralized and transparent interactions, KISSAN TOKEN endeavors to enhance efficiency and accessibility within the agricultural sector, promoting a sustainable and equitable agricultural network.

CHARITY TOKEN : KISSAN TOKEN empowers transparent and traceable transactions on the blockchain, providing a comprehensive view for both donors and recipients to monitor the flow of funds. Additionally, it serves as a catalyst for facilitating microtransactions, thereby enabling individuals to effortlessly make small donations. This functionality enhances the accessibility and ease of contributing to causes through the seamless tracking of financial transactions, ensuring a heightened level of transparency and accountability in the process.

DEFI TOKEN : KISSAN TOKEN incorporates all essential components to function as a DeFi token, representing a digital token purposefully crafted for utilization within decentralized finance (DeFi) platforms or protocols with a distinct emphasis on agricultural activities. Its design enables the seamless facilitation of diverse financial services and transactions pertaining to farming on a global scale. As a DeFi token, KISSAN TOKEN serves as a key instrument for participants engaging in decentralized financial activities within the agricultural sector, fostering a global framework for efficient and decentralized financial services related to farming practices.

FARM PLAY : KISSAN TOKEN plays a central role as the primary in-game currency, facilitating transactions for the purchase and sale of virtual items, crops, livestock, equipment, and various other farm-related assets within the gaming ecosystem. In this context, players have the ability to earn cryptocurrency rewards through successful management of their virtual farms or by actively participating in specific in-game activities tailored to enhance the overall gaming experience.

ACCESS TOKEN : KISSAN TOKEN holders frequently find it necessary to acquire and employ the functionalities or features embedded within their corresponding ecosystems. Additionally, possessing KISSAN TOKEN provides individuals with the opportunity to engage in the governance decisions of the platform. This participation in governance enhances the informative nature of the token's role within its ecosystem.

The Underlying Token

Token has a name, i.e. Kissan with a symbol 'KSN'.

FIXED SUPPLY: With a fixed supply of 63,000,000 Kissan token offers several benefits over a token with a variable supply.

Reduced inflation risk: With a fixed supply, there is no possibility of inflation caused by an increase in token supply. **Greater scarcity:** A fixed supply token is generally more scarce than a variable supply token, which can lead to greater demand and potentially higher token prices. **Predictable token economics:** A fixed supply token makes it easier to predict the token's future price movements, as the supply is known and cannot be changed.

Increased token value: As demand for the token grows over time, the limited supply can lead to an increase in the token's overall value. **Incentives holding:** A fixed supply token can incentivize long-term holding and reduce short-term speculation, as there is no possibility of dilution through new token issuance.

ON BNB CHAIN: BNB Chain also supports a wide range of decentralized applications (Dapps) that can facilitate various types of peer-to-peer transactions. These Dapps can be used to build decentralized exchanges, payment systems, and other financial applications that can be used for largescale transactions as what Kissan is also envisioned for. BNB Chain's fast transaction speed, low fees, and support for Dapps make it a good option for large-scale peerto-peer transactions **TRADEABLE** Having listed over more than 5 exchanges, Kissan token is adorned with high liquidity and instant exchange. The team has intended to make use of Kissan Token as a utility token in Kissan Platform.

IN CHARITY: Kissan token can be used in farm charities and to kick start charity projects with Donation SDK and Protocol. Just to mention Kissan can also be donated via donation.kissantoken.io to help farming communities to flourish across the world.

STAKE & EARN: Kissan token holders can earn rewards or interest by locking up their coins or tokens for a certain period of time.

PLAY TO EARN: Kissan team is coming up with play to earn games. KSN holders can earn rewards by completing certain in-game tasks or achieving certain milestones. Just to mention , this opportunity to earn is available only to Kissan token holders via token gated app.

KISSAN VERSE: Users can take avatar of farmers and can do farm activities and can also participate in farm supply chain using Kissan token. They can also do farming and can buy, sell and earn dynamic NFTs that take it shapes through data from meteorological department and the digital twin in this metaverse changes accordingly. The idea of Kissan verse has potential to be a unique and engaging metaverse that provides an immersive experience for users interested in agriculture and farming.

FARM TOKEN: Kissan token is intended to be used a medium of exchange collatorized by commodities to assist in farm supply chain and cross border movement of produces.

From a U.S. legal perspective, the categorization of "securities" is governed by section 2(a)(1) of the Securities Act of 1933. This section defines securities as: "...any note, stock, treasury stock, security future, security-based swap, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement... investment contract... or, in general, any interest or instrument commonly known as a 'security,' or any certificate of interest or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing."

It is important to note that the regulatory framework for KSN TOKEN, registered under an Indian legal firm, may be subject to the laws and regulations applicable in India. The definition of securities and relevant legal considerations may differ in the Indian legal context.

Securities must be registered per Section 5 of the Securities Act of 1933 as stated here in above. Of course, that instrument which is not security need not be registered. Therefore, one must first examine the definition of Security:

(a) Definitions - When used in this subchapter, unless the context otherwise requires— (1) The term “security” means any note, stock, treasury stock, security future, security-based swap, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement, collateral- trust certificate, pre organization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit for a security, fractional undivided interest in oil, gas, or other mineral rights, any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or, in general, any interest or instrument commonly known as a “security”, or any certificate of interest or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing.” 15 U.S. Code §77b.

Similarly, the Securities Exchange Act of 1934 defines a security, in the following fashion: “The term “security” means any note, stock, treasury stock, security future, security-based swap, bond, debenture, certificate of interest or participation in any profit-sharing agreement or in any oil, gas, or other mineral royalty or lease, any collateral-trust certificate, pre organization certificate or subscription, transferable share, investment contract, voting trust certificate, certificate of deposit for a security, any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or in general, any instrument commonly known as a “security”; or any certificate of interest or participation in, temporary or interim certificate for, receipt for, or warrant or right to subscribe to or purchase, any of the foregoing; but shall not include currency or anynote, draft, bill of exchange, or banker’s acceptance which has a maturity at the time of issuance of not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited.” Section 3(a)(10) of the Securities Exchange Act of 1934.

The U.S Supreme Court has stated that the term “investment contract” in these two definitions is treated as being the same (SEC v. Edwards, 540 U.S. 398 (2004)). So, we can see that the U.S term “security” includes also an “investment contract”. An investment contract is an “investment of money in a common enterprise with a reasonable expectation of profits to be derived from the entrepreneurial or managerial efforts of others.”(see SEC v.Edwards, 540 U.S.389, 393 (2004); SEC v. W.J.Howey Co., 328 U.S. 293, 301 (1946); see also the Forman case, at 852-853) (in this work, the “Howey Test”). To be accurate, the Howey Test requires that the profits will be made solely from the efforts of others: “... an investment contract for purposes of the Securities Act means a contract, transaction or scheme whereby a person invests his money in a common enterprise and is led to expect profits solely from the efforts of the promoter or a third party.... Such a definition...permits the fulfillment of the statutory purpose of compelling full and fair disclosure relative to the issuance of the many types of instruments that in our commercial world fall within the ordinary concept of a security... It embodies a flexible rather than a static principle, one that is capable of adaptation to meet the countless and variable schemes devised by those who seek the use of the money of others on the promise of profits.” (SEC v. W.J. Howey Co., 328 U.S. 293 (1946))

In order for us to have a deeper understanding of the issue under debate, we should take into consideration the US Supreme Court case SEC v. Howey, 328 U.S. 293 (1946), which provides further clarifications on determining whether an instrument meets the definition of security, or not. In this Supreme Court case, Howey focuses specifically on the term “investment contract” within the definition of “security”. Obviously, not every contract or agreement is an “investment contract”.

The Court determined that a contract constitutes an investment contract that meets the definition of “security” if there is:

1. an investment of money;
2. in a common enterprise;
3. with an expectation of profits;
4. solely from the (entrepreneurial or managerial) efforts of others (e.g., a promoter or third party);

The four factors must be met all together, in order to be legally considered “security”. Because this Supreme Court Decision is widely considered as fundamental to the determining elements of a “security”, we will base our analysis to its conditional factors.

Prong 1: Investment of Money

Is this an investment? Yes! It is generally accepted that an investment of money may include not only the provision of capital, assets and cash, but also of goods, services or of promissory notes. KSN is being distributed through a Token offering by the issuer KSN to purchasers with a price set per Token, so the first factor is actually met.

Prong 2: A Common Enterprise

Is this investment in a common enterprise? There are two sub-tests for the “Common Enterprise” prong – the horizontal commonality test, and the vertical commonality test, which is being divided into the narrow vertical and the broad vertical. The U.S. Courts have applied these two tests alternatively. The horizontal commonality test, which is the more common test, requires the pooling of assets from multiple investors so that all will share in the profits and risks of the enterprise i.e. the profits of each investor are similar to those of the other investors.

Both vertical commonality tests require that the investor's fortunes will be tied to the issuer/promoter's success, rather than to the fortunes of its fellow investors; the broad vertical commonality test requires that the well-being of all investors be dependent upon the issuer/promoter's expertise. On the other hand, the narrow vertical commonality test requires that the investors' fortunes be "interwoven with and dependent upon the efforts and success of those seeking the investment ... of third parties" (SEC v. SG Ltd., 265 F.3d 42, sec. 31-35 (1st Cir. 2001)).

Nevertheless, there is also the requirement for a mutual share in the profits and risks of the enterprise. Here, since the value of the token shall be based on user participation and mass adoption of the technology to which no single person is bearer to profits and losses of the same, though it might indicate towards common enterprise but it is not the case. By exchanging the KSN Token, the token owners can use the technology and various other platforms connected to the underlying platform. There is no advantage to buy the KSN Token except for the purpose of participating in the technology mass adoption and various other milestone targets.

If one so desire, and therefore there is no correlation between all token holders’ “profits” – the use of the token is discretionary. Furthermore, the token can be sold at exchanges, so the user can at any time get out of the investment and the earnings from using them shall be based on each user's effort and doesn't have much to do with the common enterprise, it is an established crypto token that is expanding to become a blockchain platform for multiple purposes. Essentially, KSN Token is based on some of the best and most intuitive technologies of the crypto world, and by that, it seems that the horizontal commonality test's requirements are not met.

By applying the narrow vertical commonality test, we can clearly see that the investors' funds are not connected or dependent upon the success of the token issuer. The KSN Token technology which has been in place and will be improved along with various other facets of business the earning of the token holder shall be based on much that person interacts at the platform and value of the token shall be based on various factors like adoption of the technology to which the token holders also contribute in their own way. That means the token holders don't benefit solely from the efforts of others.

And finally, as far as the broad vertical commonality test is concerned, it would be wrong to say that the well-being of all investors is dependent upon the issuer/promoter's expertise, because the KSN Token tech and various other platforms is to use in an interactive manner and each token holder has an equal chance of making it successful. Therefore, the token holders' well-being is completely disconnected from the issuer's expertise, wherein the activation of the rights of the digital tokens will be an automated technicality, involving only the digital world. Therefore, we see these vertical commonality tests' requirements unmet.

Furthermore, a common enterprise is deemed to exist where investors pool funds into an investment and the profits of each Token buyer correlate with those of the other investors. Whether funds are pooled appears to be the key question, and thus in cases where there is no proportional sharing of profits or pooling of funds, a common enterprise may be deemed not to exist. KSN is unlikely to be deemed a “security” at this stage of development, and that is even taking into consideration the fact that the KSN Platform is fully operational. It is worth noting that in the in case the development model is maintained in the future, the utility status of the Token is likely to be maintained after the platform will further develop new associated services. There is no pooling of funds at this stage for the purpose of investment in the company. Therefore, at this stage of development, KSN is substantially a utility token consumed to transfer value across the blockchain with a relatively stable value across various exchanges.

To conclude, the KSN Token does not meet horizontal commonality test requirements, the token holders' pecuniary rights are not being accumulated, they are discretionary. Therefore, it only seems reasonable that this prong is not met.

Prong 3: Expectation of Profits

This prong does not merely require the customer who buys the token to expect profit, because it seems unreasonable that someone will purchase a service or a good without taking into account the probability that the purchased will increase in value. The expectation of profits from a purchase of any kind of valuable is almost always present. Therefore, it seems that the prong requires not only that there will be an expectation to profit, which is trivial, but also that the purchase of that

valuable will be primarily motivated by making profits (upon resale for example), rather than by consuming or using that which was purchased. The personal consumption is a vital part of considering whether this prong is met or not, wherein it should be examined if the primary motivation of purchasing the token is to profit upon resale, or to use the underlying rights of the token. There are several court cases where this differentiation was stipulated, for example see the Forman Case. Per Forman, it "is an investment where one parts with his money in the hope of receiving profits from the efforts of others, and not where he purchases a commodity for personal consumption or living quarters for personal use".

So! Is there an expectation of profit? In our legal opinion, this factor is irrelevant to the matter, but we will analyze it in respect of the Supreme Court Decision. From an economic point of view, any type of investment is made with an expectation of profit. But just because there is a return on investment or profit, does not mean that the investment contract is a "security". The people who bought the tokens over the exchanges will primarily be motivated by functionalities it provides and also when the milestones are met it can be put to different uses in various scenarios. So, the least possible probability would be that the person is purchasing the tokens for purpose of profit upon resale as noted above it is a utility token and no money was ever raised from general public it would be unjust to reach a conclusion that the token holders are holding it for profit upon resale. Nevertheless, since the token provides a real consideration and functionality, it only seems reasonable that purchasers will use the token's rights for consumption and participation at the platform. Moreover, the main purpose of KSN is creating a blockchain-based metaverse transactional platform. So, the expectation of profit is mainly oriented towards another category of economic activities, not on KSN Tokens, which renders somewhat irrelevant the profits from the eventual Token Generation Event. Even so, this factor is probably met, on a low scale, provided that KSN is purchased by investors with an expectation of capital gain, even though we clearly express the opinion that this factor should not weigh in decisively on the matter.

Prong 3A: Causal Connection Between the Investors' Expectation of Profits and the Actions of the Issuer

As this prong should be tested only after the offering of an instrument for actions done on the part of the issuer, to create expectation of profits in the potential buyers, i.e. promises or statements from the Company within or prior to the Token Sale, to spur expectation of profits in the Token Sale participants. It needs to be highlighted that the company although did liquidity raise under different forms of sales, the incidental increase in the price (if any) of the KSN Token is secondary and not the primary purpose of conducting of issuing the coin.

Prong 4: From the Efforts of Others

This prong is based on the fulfillment of the requirement of the previous prong – expectation of profits. Assuming that prong3 is met (whereas to our opinion KSN Token does not always meet its requirement for the above-mentioned arguments), this prong "from the efforts of others" is examining the source of the profits - "whether the efforts made by those other than the investor are the undeniably significant ones, those essential managerial efforts which affect the failure or success of the enterprise." (the Forman Case; SEC v. Glenn W. Turner Enters., 474 F.2d 476, sec. 28 (Feb. 1, 1973)). Therefore, this prong cannot, on its own, qualify any instrument (or token) as a security.

Why "significant" and not "solely"? Initially, in the Howey case, the phrase is stated "solely from the effort of others". Nevertheless, the Forman case has construed the word "solely", in that context, as requiring significant or essential managerial efforts necessary to the success of the investment (instead of being the "sole effort" as this phrasing means literally). token users vs. Buyers for the Sake of Price Appreciation in the Secondary Market.

In reality, the general market for the KSN Token is composed of two major kinds of users. There is the purchaser which intends to use the token for its underlying rights for consumption, and there are those who will purchase the tokens for further secondary market appreciation. The latter will sell the tokens in the secondary market for a profit.

Prima facie, the purchasers who only purchase the token in the secondary market, are motivated by "expectation of profit". The purchasers for the sake of future selling in the secondary market might make profit per se, and courts in Forman held that "Profits" can also mean "capital appreciation resulting from the development of the initial investment" (the Forman Case).

Nevertheless, this profit will not be generated from "the effort of others". In reality, every valuable can be expected to appreciate due to secondary market factors which are not related to any continuing effort of the issuer. For example, there could be a purchase of a real estate, or gems that could appreciate later, and be sold in a profit. The purchase agreement of a real estate cannot be considered as an investment contract solely due to the fact that the real estate will almost certainly appreciate. Therefore, mere appreciation in the second market cannot be perceived as made by "the effort of others". To support this argument, it has been held by number of cases that mere secondary market appreciation cannot at all be construed or perceived as derived from "the effort of others", e.g.: "The mere presence of a speculative motive on the part

of the purchaser or seller does not evidence the existence of an "investment contract" within the meaning of the securities acts. In a sense anyone who buys or sells a horse or an automobile hopes to realize a profitable "investment." But the expected return is not contingent upon the continuing efforts of another." *Sinva v. Merrill Lynch*, 253 F. Supp. 359, 367 (S.D.N.Y.1966) Therefore, the fact that a person might purchase the token solely in order to sell it in the secondary market for profit, does not constitute on its own the prong 4, the "effort of others".

So! Is there the "solely on the efforts of others" factor met? No! The profit of the platform user always depends on his own actions. As we said, even though there is also an investment in KSN Tokens, the expectation of profits results mainly from the economic activity, not from the volatility of the Tokens. There is no clear party to be determined, whose efforts will influence the profits of the company. So, any such incentives should ideally be derived through their own efforts, rather than through a passive investment. In such a case, the factor is not met.

The Undeveloped Project, and the Pre-sale

There are two common definitions for a pre-sale. The first is receiving orders of future tokens prior to their issuance. The second definition is selling tokens in a discount, but in a limited quantity, and only in exchange for large orders. These are common acts amongst the blockchain community and it is meant to serve as an incentive to participate in the Token Sale. As for the differentiation between Token Sale and their Pre-sales, it goes without saying, that presales to Token Sales, like Token Sales themselves, should likewise undergo an examination per the Howey Test (or other securities laws in case of other jurisdictions).

The Pre-sale occurs, and often the Token Sale occurs, prior to the development of the project. Since the development of the project is being made by the issuer, this act might be considered as "essential managerial efforts of others". If this is the case, then the token might be deemed a security.

There are two approaches to address the pre-sale issue, two schools to treat the undeveloped project's token sale, as far as prong4: "the effort of others" is concerned. The first approach can be considered, to our opinion, as a "technical approach". This school argues that if the project is undeveloped, then the tokens' value is almost utterly dependent on the managerial efforts of the issuer. Therefore, in case a token is sold when the project is undeveloped, then the tokens meet the requirement of prong 4 and along with the analysis of the previous prongs as well, the tokens might be deemed as a security. Here in the case of KSN Platform tech was already developed and some features of the platform are in progress, all the details regarding the milestones were discussed in the whitepaper and the some of the coins were pre-mined and users were allowed to mine the coins using a specific technical functionality developed and ready to run.

This school has conceived the "SAFT". The acronym stands for "Simple Agreement for Future Tokens". This is a legal document which is based on the SAFE, a "Simple Agreement for Future Equity". The SAFT is an instrument which is meant to serve as a way to bypass the technical issue of undeveloped project being dependent upon the essential managerial efforts of others.

The SAFT is an investment contract, to receive tokens in a future date. The SAFT itself is meant to serve as "investment agreement" in the U.S securities laws federal meaning as previously discussed. Therefore, the SAFT should be sold only under the exemption from registration of rule 506 (C) of Regulation D of the Securities Act, which limits the offer of the SAFT only to 35 people, and to unlimited "Accredited Investors", one definition of whom is "Any natural person whose individual net worth, or joint net worth with that person's spouse, exceeds \$1,000,000" (Rule501(a)(5)). The SAFT project has conducted a thorough analysis, is very interesting and instructive, and on top it may offer some theoretical tax benefits, which we shall not cover in this work.

Nevertheless, so far as the U.S securities laws are concerned, per this technical approach, we see no material difference between selling the SAFT, and selling actual tokens – so long as the project is still undeveloped. In both cases, per the technical approach, the securities laws are to apply, and therefore only 35 people and unlimited "accredited investors" may enjoy from the benefits of the Token Sale or its pre-sale, whether by Token Sale or without it. Not applicable in this case due to the above said development phase already achieved.

The second approach look past the technicalities of whether the project is fully developed or there is still work to be done, utilizing the funds raised or regardless. We may name this approach "the material approach" as it prefers substance over form. Per this approach, a token shall be a security, or non-security, regardless of the fact that the project is not fully developed yet .i.e. the token sale does not change its legal nature or character completely due to the mere fact that the project is completed or nearly complete.

From the two approaches, we favor the second “material approach”. We believe that the thought that a token sale is a security merely because the underlying project is not fully deployed or completed, is a legal error as far as cooperative Token Sales are concerned. Though by reviewing common policies and considerations regarding investors protection we can clearly understand that a purchaser’s risk in buying a token of an undeveloped project is larger than if the project was developed, it is nevertheless limited still, and understood due to the cooperative nature of many of the Token Sale projects.

The Forman Case turned on a cooperative housing project. The court stated that “people who intend to acquire only a residential apartment in a state-subsidized cooperative, for their personal use, are not likely to believe that, in reality they are purchasing investment securities simply because the transaction is evidenced by something called a share of stock...the inducement to purchase was solely to acquire subsidized low-cost living space; it was not to invest for profit...when a purchaser is motivated by a desire to use or consume the item purchased ... the securities laws do not apply”. So, we can clearly see that the Forman Case explains that cooperative initiatives, where a purchaser is likely to purchase a share in the project itself (not in the legal entity), will generally not be treated as securities offerings.

As most Token Sales hold an underlying cooperative ideal, in case such exists, it must be taken into account in considering whether the “essential effort of others” prong is met or not. Therefore, as far as cooperative Token Sales are concerned, we must state our opinion that a token should not be viewed as if it has changed its nature or legal status merely because it is sold prior to the system’s launch, the project’s completion or the code’s development.

Moreover, and to support the view of the second “material approach”, we wish to indicate that the first “technical approach” disregards the development stage of the project and classifies its token sale as a potential security. It is possible that the very last steps are missing and the Token Sale is being conducted and completed concurrent or just prior to the completion of the development of the project. Still, this “technical approach” shall deem such a project as utterly dependent on the essential managerial efforts of others, and as such – a security.

Nevertheless, we wish to note that we have not found any conclusive law or case law on the subject to prefer either view on the subject matter. Hence, we do not further inquire on this subject further.

In the case at hand, the development of the underlying project is under process though some of the functionalities are fully developed and some of them are with longer incubation period and will be developed over a period of coming months.

Therefore, as per our view, in case of the KSN Token, considering the fact that the system is already developed by the time of the offering, and considering its participative characteristics and some of the functionalities will be developed in future, this prong cannot be termed as fully met.

Interim conclusion – the Howey Test

By concluding all the variants on the KSN Token, we can safely assume that the KSN Token will not be deemed as a security per the Howey Test. It takes all four prongs to be fulfilled in order to see an instrument as a security. The “investment of money” is not met, the “common enterprise” with the horizontal commonality test might not be, since the rewards for holding the token are based on participation at the KSN Token Network and users/token holders will be rewarded on the basis of their participation and the tokens serve a purpose for using the platform in various ways and not just by holding the tokens. Furthermore, the interested users of the KSN Token can buy the tokens only from the secondary markets as they are listed at exchange and can use them at the platform. According to our analysis, also the two vertical commonality tests are not met.

Furthermore, the “expectations of profit” prong will not be fulfilled as far as the personal consumers are concerned but will definitely be fulfilled for the purchasers with the intent to sell the tokens in the secondary market for profits.

And eventually, for the “effort of others” component, the schools are divided between the technical approach and the material approach, wherein per the technical approach the “efforts of others” component is not met because the KSN Token network has already started and the profits of the investors are dependent upon the efforts of the participants, while the material approach, which we support, claims that that the “efforts of others” component is not fulfilled because an instrument does not utterly change its legal status just because the underlying project has not been completed yet. So, the overall risk score is quite minimal and we are positive that KSN Token shall not be considered as ‘Security’.

Therefore, per our legal view, KSN Token should not be deemed as a security per the U.S federal securities laws.

European Union and UK

From an EU and UK legal standpoint, when we conducted a detailed decomposition and analysis of all online KSN Token business processes, we were unable to detect and identify any process that can be regarded as a relationship between an investor and an Issuer of securities. On the other hand, if we aim to register the issue of securities, we will not be able to prove to the regulator body that Tokens are securities. Moreover, the main Token holders are interested in participating in the trading of transactions, and this is peer-to-peer mainly.

By our opinion, the expertise of KSN Token under the EU securities legislation cannot be applied to KSN Token due to the fact that all business processes and relationships within the platform are classic relationships for service providers and service consumers, all within a blockchain-based platform. There is no contribution to any business venture.

Nowadays, the matters of cryptocurrency turnover and production of digital assets has not special legal regulation. There are neither special laws, nor separate legal Institute or branch of law. Therefore, we cannot qualify a Token as a unique legal essence.

Token taxonomy according to ESMA and EBA

Although not legally binding at a supranational level, it is advisable to refer to the regulatory framework structured on the Advice on Initial Token Offerings and Crypto-Assets of ESMA⁴ and the Report with advice for the European Commission on crypto-assets of EBA⁵; both published on 9th January 2019.

Presently, there is no common taxonomy of crypto-assets in use by international standard-setting bodies. However, even if crypto-assets may have different features or serve different functions, a basic taxonomy of crypto-assets generally comprises three main categories of crypto-assets:

Payment/Exchange/Currency Tokens: Payment Tokens are Tokens which have no tangible value, except for the expectation they may serve as a means of exchange or payment to pay for goods or in the services that are external to the ecosystem in which they are built. "Stablecoins" are a relatively new form of payment/exchange Token that is typically asset-backed (by physical collateral or crypto-assets) or in the form of an algorithmic "stablecoin".

Utility Tokens: Utility Tokens are Tokens which are intended to typically enable access to a specific product or service, often provided using a DLT platform but are not accepted as a means of payment for other products or services.

Investment Tokens: Investment Tokens may represent financial assets, such as a debt or equity claim on the Issuer.

Investment Tokens promise, for example, a share in future company earnings or future capital flows. In terms of their economic function, therefore, these Tokens are analogous to financial instruments. However, investment Tokens may also exclusively reflect the ownership rights of an asset, which may not be deemed as a financial instrument. There is a wide variety of crypto-assets, some of which have features spanning more than one of the categories identified above. The individual Token classifications are not mutually exclusive.

We will further analyze the legal qualification of crypto-assets under the European Banking legislation and ESMA's remit (MiFID II), and under the E-Money Act in line with the second Electronic Money Directive (EMD2) and the second Payment Services Directive (PS2). Reflecting on the above, the current perimeter of regulation is such that crypto-assets may, depending on their characteristics, qualify as financial instruments, electronic money, or none of the foregoing.

The definition of a financial instrument is the key element towards determining whether trading services with respect to a Token can be deemed to be regulated in terms of the Banking Act and other relevant laws. Financial instruments are defined by the Article 4(1)(15) of MIFID II as those instruments specified in Section C of Annex I of MIFID II; those are:

I. Transferable securities;

II. Money-market instruments;

III. Units in collective investment undertakings;

IV. Options, futures, swaps, forward rate agreements and any other derivative contracts relating to securities, currencies, interest rates or yields, emission allowances or other derivatives instruments, financial indices or financial measures which may be settled physically or in cash;

V. Options, futures, swaps, forwards and any other derivative contracts relating to commodities that must be settled in cash or may be settled in cash at the option of one of the parties other than by reason of default or other termination event;

VI. Options, futures, swaps, and any other derivative contract relating to commodities that can be physically settled provided that they are traded on a regulated market, a MTF, or an OTF, except for wholesale energy products traded on an OTF that must be physically settled;

VII. Options, futures, swaps, forwards and any other derivative contracts relating to commodities, that can be physically settled not otherwise mentioned in point 6 of this Section and not being for commercial purposes, which have the characteristics of other derivative financial instruments;

VIII. Derivative instruments for the transfer of credit risk;

IX. Financial contracts for differences;

X. Options, futures, swaps, forward rate agreements and any other derivative contracts relating to climatic variables, freight rates or inflation rates or other official economic statistics that must be settled in cash or may be settled in cash at the option of one of the parties other than by reason of default or other termination event, as well as any other derivative contracts relating to assets, rights, obligations, indices and measures not otherwise mentioned in this Section, which have the characteristics of other derivative financial instruments, having regard to whether, inter alia, they are traded on a regulated market, OTF, or an MTF;

XI. Emission allowances consisting of any units recognized for compliance with the requirements of Emission Directive. It is necessary to individually assess each of these instruments and determine whether KSN Token can be considered one of these.

For the purpose of this analysis, instruments listed here can be grouped together as the derivative financial instruments.

Transferable securities

Transferable securities are defined in Article 4(1)(44) as those classes of securities which are negotiable on the capital market, with the exception of instruments of payment, such as:

- a) shares in companies and other securities equivalent to shares in companies, partnerships or other entities, and depositary receipts in respect of shares;
- b) bonds or other forms of securitized debt, including depositary receipts in respect of such securities;
- c) any other securities giving the right to acquire or sell any such transferable securities or giving rise to a cash settlement determined by reference to transferable securities, currencies, interest rates or yields, commodities or other indices or measures.

Although no formal test for defining an instrument as a transferable security has been devised by the European regulator, the key characteristics of a transferable security can be derived. Such characteristics would consist of three formal criteria and a substantive one. The formal criteria would be transferability (meaning that the units shall be able to be assigned to another person), negotiability (meaning that the units can be transferrable with ease), and standardization (meaning that the units are sufficiently standardized for the purposes of the ease of search and purchase). In case of KSN Token (as with practically any other kind of token) all these criteria are fulfilled: tokens can be transferred between addresses and it can be done sufficiently easy, and all KSN Tokens are the same - which is a considerable argument for their standardization. The fourth criterion is a substantive one. MIFID II provides a non-exhaustive list of instruments that are typically considered securities; it is likely that this list shall be used as a reference in determining whether a new product can be considered a transferrable security. Therefore, to be considered a security, KSN Token must be at least comparable to the examples provided in MIFID II. The examples provided are the shares and their equivalent, bonds or other forms of securitized debt, and the derivative instruments that give the right to acquire such securities or giving rise to the cash settlement. KSN Tokens are in themselves neither shares nor bonds; their holders are not entitled neither to the fixed income like the bonds do, nor do the KSN Tokens grant their holders the equity stake in any corporation or any other rights, typically associated with shares or their equivalent, such as the right to receive a share in the revenue of the respective business or the right to vote or otherwise define the course of business of the issuer. KSN Token holders do not have the right to acquire any such securities, and neither does cash settlement arise from holding KSN Token, since no obligation of payment exists in regard to the KSN Token holders.

It is unlikely for KSN Token to be considered transferable securities under MIFID II.

Money-market instruments

Money-market instruments are defined in Article 4(1)(17) as classes of instruments which are normally dealt in on the money market, such as treasury bills, certificates of deposit and commercial papers and excluding instruments of payment. Since KSN Token bears no similarities to these instruments and is not intended to be dealt on the money market, it is unlikely a money-market instrument.

Units in UCITS

Units in collective investment undertakings are defined by the UCITS Directive, Article 1 of which defines UCITS as an undertaking with the sole object of collective investment in transferable securities or in other liquid financial assets referred to in Article 50(1) of the same Directive of capital raised from the public and which operate on the principle of

risk-spreading; and with units which are, at the request of holders, repurchased or redeemed, directly or indirectly, out of those undertakings' assets. Action taken by a UCITS to ensure that the stock exchange value of its units does not significantly vary from their net asset value shall be regarded as equivalent to such repurchase or redemption. The Company is not planning to invest the proceeds from the sale of KSN Token in transferable securities or other financial instruments mentioned in the Article 50(1) of the UCITS Directive, such as financial derivative instruments, units in UCITS or money-market instrument. The KSN Tokens themselves are not redeemable, and the Company has no intention of repurchasing them; and while it is unlikely that Trading Venue would constitute a stock exchange for the purpose of the Article 1 of the UCITS Directive, the Company does not intend to take action to influence the market price of KSN Token sold to the token holders. It is therefore unlikely that the Company may be considered a UCITS under the UCITS Directive, and the KSN Tokens are most likely NOT the units in UCITS.

Derivative instruments

A derivative is a type of financial instrument whose value is based on the change in value of an underlying asset or a basket of assets, of which the exact mechanics (option, future, swap, etc.) and the underlying assets (securities, currencies, commodities, credit risk, etc.) vary. Article 4(1) of CIR mandates the EMIR report to specify a derivative on the basis of the contract type and the asset class; according to Article 4(2) of CIR the derivative shall be specified in Field 1 of Table 2 of the Annex as one of the contract types:

- a) financial contract for difference;
- b) forward rate agreement;
- c) forward;
- d) future;
- e) option;
- f) spreadbet;
- g) swap;
- h) swaption;

These types of derivative contracts are defined in the Article 1(8) - (12) of Annex III to RTS 2: Future means a contract to buy or sell a commodity or financial instrument in a designated future date at a price agreed upon at the initiation of the contract by the buyer and seller. Every futures contract has standard terms that dictate the minimum quantity and quality that can be bought or sold, the smallest amount by which the price may change, delivery procedures, maturity date and other characteristics related to the contract. Option means a contract that gives the owner the right, but not the obligation, to buy (call) or sell (put) a specific financial instrument or commodity at a predetermined price, strike or exercise price, at or up to a certain future date or exercise date Swap means a contract in which two parties agree to exchange cash flows in one financial those of another financial instrument at a certain future date. Forward or forward agreement means a private agreement between two parties to buy or sell a commodity or financial instrument at a designated future date at a price agreed upon at the initiation of the contract by the buyer and seller.

Another type of derivative instrument is a financial contract for difference, which is specified in ACP as a derivative product that gives the holder an economic pressure, which can be long or short, to the difference between the price of an underlying asset at the start of the contract and the price when the contract is closed. Neither KSN Token holder nor the Company or any third party are subject to obligations similar to specified for the typical derivative contracts, and KSN Token holders are not entitled to demand any commodity or financial instrument to be sold to them; neither are they entitled to demand an exchange of cash flows in any financial instruments or a cash settlement from any third party. The value of KSN Token is not based on or relate to securities, commodities, currencies, interest rates or yields, emission allowances or other derivatives instruments, financial indices or financial measures, or any other assets, rights, obligations, indices and measures and is only determined based on the current market demand for it, and KSN Token is not used to transfer credit risk. Therefore, KSN Token are unlikely to be considered derivative financial instrument as specified in Section (C) (4) – (10) of MIFID II.

Emission allowances

According to the Article 3(a) of the Emissions Directive, allowance means an allowance to emit one ton of carbon dioxide equivalent during a specified period, which shall be valid only for the purposes of meeting the requirements of this Directive and shall be transferable in accordance with the provisions of this Directive. Since none of the activities carried out by the Company are connected to the emissions of the carbon dioxide, and KSN Token holders do not grant the rights to emit carbon dioxide or its equivalents, KSN Token is unlikely to be qualified as an emission allowance.

Prospectus Requirements

The PD requires publication of a prospectus before transferable securities are offered to the public or traded on a regulated market. Since KSN Tokens are unlikely to be considered transferable securities, requirements of the PD do not apply to the issuance and listing of KSN Token.

Alternative Investment Funds

The AIFMD lays down the rules for the authorization, ongoing operation and transparency of the managers of alternative investment funds (AIFMs) which manage and/or market alternative investment funds (AIFs) in the Union. Therefore, it is necessary to assess whether the Company may be considered an AIFM. The Article 2(1)(c) defines the scope of AIFMD regulations as applicable to non-EU AIFMs which market one or more AIFs in the Union irrespective of whether such AIFs are EU AIFs or non-EU AIFs. According to Article 4(1) of the AIFMD, AIF means a collective investment undertaking, including investment compartments thereof, which raises capital from a number of investors, with a view to investing it in accordance with a defined investment policy for the benefit of those investors, and does not require authorization pursuant to Article 5 of UCITS Directive. AIFM means legal persons whose regular business is managing one or more AIF. Since the Company is not raising capital by selling KSN Token with a view to invest it for the benefit of KSN Token holders, it cannot be considered neither AIF, nor AIFM. Therefore, the regulations of the AIFMD do not apply to the issuance and listing of KSN Token.

Electronic money

Another question that must be answered is whether the special regime for electronic money as covered by the EMD can be applied to KSN Tokens. According to the Article 2(2) of the EMD, 'electronic money' means electronically, including magnetically, stored monetary value as represented by a claim on the issuer which is issued on receipt of funds for the purpose of making payment transactions as defined in point 5 of Article 4 of Directive 2007/64/EC, and which is accepted by a natural or legal person other than the electronic money issuer. It seems that KSN Token do not fit the definition of electronic money. While EMD states that e-money shall be issued on receipt of funds, the amount of KSN Token to be generated is constant and does not rely upon the number of possible purchasers; while it is entirely possible to acquire KSN Token via the transfer of the funds to the Company, KSN Token can be obtained in other ways, and can be used by the Company itself. Furthermore, KSN Tokens are not represented by a claim on the Company, since they are non-redeemable, and the Company is not obliged to make any payments in respect to the holders of KSN Tokens. Furthermore, as provided by the Article 1(4) of the EMD, even if the instrument can be considered electronic money, the EMD provisions do not apply if the instrument is exempt under the Article 3(k) of the PSD I. While the PSD I is repealed with the entrance of PSD II in force, according to the Article 114 of PSD II any reference to PSD I shall be construed as a reference to PSD II read in accordance with the correlation table in Annex II to PSD II. According to the Annex II, Article 3 of the PSD I correlate to the Article (3) of the PSD II. As demonstrated in the next section, if the activities of the Company could be considered payment services under PSD II, it is likely that they will be exempted under provisions of the Article 3(k) of the PSD II; such exemption would correlate with the exemption under Article 3(k) of PSD I and as such qualify to exempt the Company from the provisions of the EMD.

Payment Services

Another potentially applicable regulations are those imposed by the PSD II in regard to the payment services. Since transfer of KSN Token can be used as a consideration under the agreements entered into via the Platform, it is necessary to assess whether such transfer could be considered a payment transaction, and whether the Company is rendering payment services as defined by the PSD II. As stated in Article 4(3) of the PSD II, the payment service means any business activity set out in Annex I of the Directive. Those are:

1. Services enabling cash to be placed on a payment account as well as all the operations required for operating a payment account.
2. Services enabling cash withdrawals from a payment account as well as all the operations required for operating a payment account.
3. Execution of payment transactions, including transfers of funds on a payment account with the user's payment service provider or with another payment service provider:
 - a. execution of direct debits, including one-off direct debits;
 - b. execution of payment transactions through a payment card or a similar device;
 - c. execution of credit transfers, including standing orders.
4. Execution of payment transactions where the funds are covered by a credit line for a payment service user:
 - a. execution of direct debits, including one-off direct debits;
 - b. execution of payment transactions through a payment card or a similar device;
 - c. execution of credit transfers, including standing orders.
5. Issuing of payment instruments and/or acquiring of payment transactions.
6. Money remittance.

7. Payment initiation services.

8. Account information services.

It is therefore necessary to assess whether the activities of the Company can be considered as each of the following. It is possible to group together the services mentioned in the Annex I (1) and Annex I (2) as operations with the payment accounts, as well as to group services mentioned in the Annex I (3) and Annex I (4) as operations regarding payment transactions. 5.6.11. Operations with payment accounts Payment account is defined in Article 4(12) of PSD II as an account held in the name of one or more payment service users which is used for the execution of payment transactions. Payment transaction in accordance to Article 4(5) means an act initiated by the payer or on his behalf or by the payee, of placing, transferring or withdrawing funds, irrespective of any underlying obligations between the payer and the payee. Funds are defined in Article 4(25) and mean banknotes and coins, scriptural money or electronic money as defined in Article 2(2) of EMD. As demonstrated in the previous section, KSN Tokens do not qualify as electronic money under the regulations of EMD; nor can they be considered banknotes, coins or scriptural money. This means KSN Tokens are not funds under the PSD II, and therefore transactions of KSN Tokens with them would not constitute a payment transaction under PSD II. Since operations with the private wallets of the clients do not constitute operations with payment accounts, and Annex I (1-2) services are not applicable.

Payment Transactions

Since operations with KSN Token do not constitute payment transactions, Annex I (3-4) are not applicable to the services rendered by the Company. 5.6.13. Issuing and/or acquiring of payment instruments According to the definitions in Article 4(13-14), payment instrument means a personalized device(s) and/or set of procedures agreed between the payment service user and the payment service provider, used in order to initiate a payment order, which is an instruction by a payer or payee to its payment service provider requesting the execution of a payment transaction. While operations with KSN Tokens do not constitute payment transactions, the Company cannot be considered issuing payment instruments; neither it can be considered acquiring payment transactions.

Money remittance

Money remittance is specified in Article 4(22) as a payment service where funds are received from a payer, without any payment accounts being created in the name of the payer or the payee, for the sole purpose of transferring a corresponding amount to a payee or to another payment service provider acting on behalf of the payee, and/or where such funds are received on behalf of and made available to the payee. The Company does not render such services; it is only possible to purchase KSN Tokens in one's own name, and the proceeds received are not transferred to another person.

Payment initiation services

According to Article 4(15), payment initiation service means a service to initiate a payment order at the request of the payment service user with respect to a payment account held at another payment service provider. The Company does not render such services and does not have access to user's payment accounts at payment service providers.

Account information services

Account information service is specified in Article 4(16) as an online service to provide consolidated information on one or more payment accounts held by the payment service user with either another payment service provider or with more than one payment service provider. The Company does not provide such services.

Exemptions for a limited-use instrument

It is argued that the activities of the Company in regard to the issuance and listing of KSN Token do not constitute payment services at all, and KSN Token cannot be considered payment instruments as defined by the PSD II. But even if KSN Token could be considered a payment instrument under the PSD II, the regulations will still be inapplicable due to the exemption provided by the Article 3(k) of the Directive. According to this exemption, PSD II does not apply to services based on specific payment instruments that can be used only in a limited way, that meet one of the following conditions: (i) instruments allowing the holder to acquire goods or services only in the premises of the issuer or within a limited network of service providers under direct commercial agreement with a professional issuer; (ii) instruments which can be used only to acquire a very limited range of goods or services; It seems that the exemption may be applied to the KSN Token, since they are intended to be used under a limited set of agreements, only between the users of the Platform and for a limited purpose. Thus, it can be argued that if KSN Token could be considered payment instruments, they would likely be also considered only suitable for acquiring a very limited range of services within a limited network of service providers under direct commercial agreement with the Company.

To round up a conclusion, we can safely iterate the following:

- The market price of the Token does not influence on the company's profit, and the company profit does not influence on the Token market price.
- There are no declarations in Whitepaper promising "Expectation of Profits" to Token buyers. Token holders can receive any income from the Token by their own efforts, or they can also lose the Tokens while trading.
- KSN Token is clearly not greenhouse emission allowances.
- KSN Token does not constitute any sort of debt obligation. For essentially the same reason, a KSN Token is not a bond or other tradable debt obligation.
- KSN Token does not constitute a share because it neither entitles its holder to a dividend nor grants its holder any right to participate in the governance of KSN or of any other company.
- KSN Token is not a subscription right or other tradable right granting the right to acquire securities. A KSN Token simply does not give its holder any option to acquire a bond or a share.
- The Company does not propose to use the monies received from the sale of KSN Tokens for following any defined investment policy for the benefit of the buyers of KSN Token in question and in their common interests: the buyers of KSN Token will not have distributed to them any income earned as a result of operating the platform.

Furthermore, a derivative security comprises a tradable security expressing a right or an obligation to acquire, ex-change or transfer, provided that its value depends, directly or indirectly, on:

1. the exchange or market price of a security;
2. on any interest rate;
3. securities index, other financial index or financial indicator, including the inflation rate, freight rate, emission allowances or other official economic statistics;
4. currency exchange rates;
5. credit risk and other risks, including climatic variables;
6. the exchange or market price of a commodity.

The KSN Token does not represent any of such cases.

While the value of a KSN Token would likely depend on the success of the ecosystem, the content available via that ecosystem does not constitute a commodity. Thus, a KSN Token is neither a derivative security nor a derivative contract.

Electronic money is commonly defined as a digital alternative to cash allowing users to make cashless payment with money stored over the internet with the final aim to facilitate the emergence of intuitive electronic money services and encourages effective competition between all market participants.

A Token is to be classified as electronic money if the following conditions are met altogether:

- Is electronically stored;
- Has monetary value;
- Represents a claim on the Issuer;
- Is issued on receipt of funds;
- Is issued for the purpose of making payment transactions;
- Is accepted by persons other than the Issuer.

In our legal view, the KSN Token shall serve as an integral feature of the core processes of the platform, as denoted in the Whitepaper. However, nothing in the Whitepaper provided by the Protocol indicated that KSN Token holders can have a claim against the issuer's assets arising from funds which were initially placed against such issuance of KSN and that such holders can redeem their funds at par value. Therefore, KSN Token falls outside of the scope of the definition of Electronic Money.

Finally, KSN are likewise not depository receipts. A depository receipt is a security that represents ownership of the securities of a foreign issuer and which can be admitted to trading on a regulated market independently of the securities of the foreign issuer. To constitute a depository, receipt a KSN Token would need to represent an ownership of a security. All the functions of a KSN Token are listed above. An instrument fulfilling only those functions does not constitute a security.

UK and European Union interim conclusions.

It has been demonstrated that the KSN Token is unlikely to be considered a financial instrument under the European Regulations, and so, it is exempt from the regulations of MiFID II, PD, AIFMD and UCITS Directive. Furthermore, it is unlikely that regulations on electronic money or payment services imposed by EMD and PSD II could be applied to the business activities of the Company in regard to the issuance or listing of the KSN Tokens.

Conclusion

- 1. At this stage of development, the KSN Token is more likely not to be deemed a “security” under the US, EU and other international legislation.**
- 2. In the future stages of development, the KSN Token should maintain the utility legal qualification, based on the Company’s business plan and the technical development of the blockchain.**
- 3. We have found no signs of fraud and scam, Ponzi scheme, tort, consumer fraud, known schemes of income laundering and tax evasion.**
- 4. Token buyers do not have any rights to the company’s profit. The KSN Tokens don’t give equal rights to their holders. This fact excludes the identification of the Token as securities.**
- 5. The founders of KSN Token do not possess any ability to affect the Token price. The market price of Token does not influence the company’s profit, and the company’s profit does not influence the Token’s market price.**
- 6. All scenarios of the turnover of the Token is strictly ordered and implemented on the blockchain by smart contracts. No other scenarios are technically feasible. None of the scenarios of utilizing the Token has the signs of securities rights realizing.**

Still, we recommend the Company to:

- Avoid granting rights, similar to the rights of shareholders / owners;**
- Conduct marketing to avoid giving promises of the KSN Token price growth (but, it is possible to make reasonable predictions of the possible growth of the project itself);**
- Conduct regular legal approach for tracking possible updates.**

Additional Notes

Financial Crimes Enforcement Network (“FinCEN”)

FinCEN is a bureau in the U.S department of Treasury, with a mission to safeguard the U.S financial system from illicit use, combat money laundering and promote national security through the collection, analysis, and dissemination of financial intelligence and strategic use of financial authorities.

FinCEN regulates money transmitting businesses. The U.S code stipulates that anyone who knowingly conducts, controls, manages, supervises, directs, or owns all or part of an unlicensed money transmitting business, shall be fined or imprisoned not more than 5 years, or both (18 U.S. Code § 1960). Per the regulations, a “money transmitter” is either a person that provides money transmission services, or any other person engaged in the transfer of funds.

FinCEN has treated cryptocurrency (convertible virtual currency) as money for the purpose of the law (FIN-2013-G001) and therefore anyone who “(1) accepts and transmits a convertible virtual currency or (2) buys or sells convertible virtual currency for any reason is a money transmitter under FinCEN’s regulations, unless a limitation to or exemption from the definition applies to the person”.

In a later guidance, FinCEN stipulates that:

“How a user obtains a virtual currency may be described using any number of other terms, such as “earning,” “harvesting,” “mining,” “creating,” “auto- generating,” “manufacturing,” or “purchasing,” depending on the details of the specific virtual currency model involved ... What is material to the conclusion that a person is not an MSB [Money Services Business] is not the mechanism by which a person obtains the convertible virtual currency, but what the person uses the convertible virtual currency for, and for whose benefit.” (FIN-2014-R001).

In our view, since the liquidity raise (under any factual form), was conducted for a limited number of people as the tokens were issued and the users have the option to buy the same and capital was raised from general public and being used for further developments of the project, therefore the KSN Token cannot and should not be deemed as a money transmitter and therefore is not a money services business.

Moreover, per the above excerpt, the liquidity raise (under any factual form) is indeed a “creation” or “manufacturing” of convertible virtual currency, in a very similar way to mining, and so its issuance has been explicitly excluded from the definition of money transmittance.

And lastly, the issuer does not purchase back the issued KSN Token, as a business nor as a dividend, and therefore only “transmits” but not “accepts” the KSN Token. Thus, this activity is insufficient for “exchanger” status.

FinCEN Guidance (FIN-2013-G001) also defines an “administrator”, who is a person engaged as a business in issuing (putting into circulation) a virtual currency, and who has the authority to redeem (to withdraw from circulation) such virtual currency. Such “administrator” requires a license of a money services business.

To address the “administrator” definition, per the data provided to us, the company does not possess the authority nor the power to remove or eliminate the KSN Token from the digital existence, which does not constitute a “redeem”, and therefore the company is not being an “administrator” per FinCEN’s definition.

Thus, being constructed as it is and in the TGE configuration, we see no relevance of obtaining a FinCEN money services business license for the KSN Token.

Needless to say, KSN Token in general, and as a secondary consideration, the “customers” (the KSN Token purchasers), may or may not utilize the Virtual Currency for investment purposes, or buy the token to use the platform.

The above analysis is grounded in information acquired from a representative of KISSAN TOKEN LIMITED, the company’s whitepaper, publicly available information, and the prevailing law as of the date of this opinion. The examination encompassed U.S. federal, EU, and Singapore securities laws, along with an analysis of other relevant legislations. No expression of opinion is provided concerning any other body of law or legal framework, including, but not limited to, the franchise laws of any other country. It’s noteworthy that no court has definitively addressed whether blockchain-based Tokens, specifically the KSN Token in this case (representing KISSAN TOKEN LIMITED), qualify as “securities” under U.S. federal law. Consequently, the SEC or a court of competent jurisdiction might arrive at a conclusion different from what is stated in this opinion letter. This letter does not offer any warranties or guarantees regarding the future treatment of the KSN Token. It is important to acknowledge that, in the context of representing KISSAN TOKEN LIMITED, this token operates within the regulatory framework of India.
